Adolescence: Development during a Global Era | Facebook

Social and emotional development Adolescence is a time of exploration, experimentation and decision-making as young people establish a sense of identity and increased independence. A big part of how identity develops is through experimentation, including trying out some things so that they can be either incorporated or rejected in future.

Adolescent development - Be You

A child in late adolescence: Uses complex thinking to focus on less self-centered concepts and personal decision-making. Has increased thoughts about more global concepts, such as justice, history, politics, and patriotism. Often develops idealistic views on specific topics or concerns. May debate and develop intolerance of opposing views

Cognitive Development in Adolescence

Adolescence is the period of transition between childhood and adulthood. Children who are entering adolescence are going through many changes (physical, intellectual, personality and social developmental). Adolescence begins at puberty, which now occurs earlier, on average, than in the past. The end of adolescence is tied to social and emotional factors and can be somewhat ambiguous.

Boys might still be maturing physically during this time. Your teen might have concerns about her body size, shape, or weight. Eating disorders also can be common, especially among girls. ... The American Academy of Child & Adolescent Psychiatry has many fact sheets for parents on child and adolescent health and development.

Child Development: Adolescence (15-17 years old) | CDC

Adolescence is a time of enormous transition as children move through the teenage years and into adulthood. Although adolescence may appear to be a turbulent time, it's also a period of great potential as young people engage more deeply with the world around them. Adolescents typically grow physically, try new activities, begin to think more critically, and develop more varied and complex relationships.

Adolescent Development Explained | HHS.gov

Adolescence, transitional phase of growth and development between childhood and adulthood. The World Health Organization (WHO) defines an adolescent as any person between ages 10 and 19. This age range falls within WHO's definition of young people, which refers to individuals between ages 10 and 24. Three youths running down a street together.

Brings together cutting-edge research on adolescent development with a focus on policies and interventions; Distinctive in its focus on issues that uniquely affect adolescents in low- and middle-income countries

Handbook of Adolescent Development Research and Its Impact ...

During the Millennium Development Goals era, global approaches to monitoring adolescent health were ad hoc, consisting of various surveys that were not designed to measure the major contributors to the disease burden of adolescents and were highly variable in age . Few surveys extend the age limit downwards to assess even the most fundamental aspects of growth and nutrition in early adolescence, and there are equally large deficits in the upper age of children's surveys that ostensibly ...
