Airy Functions And Applications To

The Airy function is the solution to time-independent Schrödinger equation for a particle confined within a triangular potential well and for a particle in a one-dimensional constant force field. For the same reason, it also serves to provide uniform semiclassical approximations near a turning point in the WKB approximation , when the potential may be locally approximated by a linear function of position.

Applications of Airy functions continue to proliferate, and practitioners will welcome this comprehensive compilation of mathematical and physical information. This new edition is a considerable improvement on what was already an excellent book, with a broader approach and the addition of many new references.

The Airy functions Ai(x) and Bi(x) are linearly independent solutions of the differential equation $d^2 y/dx^2 = xy$. For real x, Ai(x) can be written as $1/\pi$ times the integral from zero to infinity of the cosine of $xt+(t^3/3)$, with respect to t. It is convenient to define two more functions Gi(x) and Hi(x), the inhomogeneous Airy or Scorer functions.

Definitions for the Airy Function. Several definitions exist. The most common is graphed above and is the solution to the Airy differential equation $y'' - k^2 \phi x = 0$. Other definitions include using special functions (like Bessel functions) to define the Airy function, or as an integral (Milton, n.d.): Or as a power series:

Airy Functions and Applications to Physics

Airy function is used as a solution for Shcrodenger equation to study resonant tunneling in multilayered based on the exact solution of the Schrodinger equation under the application of a constant electric field, by using the transfer matrix approach, this paper concentrates and shows that the two functions of Airy have almost the same behavior as that of trigonometric functions for the negative values of x.

Airy functions are applied in many branches of both classical and quantum physics. The function Ai(x)first appears as an integral in two articles by G.B. Airy on the intensity of light in the neighborhood of a caustic (Airy (1838, 1849)). Details of the Airy theory are given in

DLMF: 9.16 Physical Applications

The use of special functions, and in particular Airy functions, is rather common in physics. The reason may be found in the need, and even in the necessity, to express a physical phenomenon in terms of an effective and comprehensive analytical form for the whole scientific community. However, for the past twenty years, many physical problems have been resolved by computers.
