Power Drive Battery Charger Troubleshooting

1. The first step would be to make sure the vehicle has enough voltage to trigger the charger turn-on signal from the on-board computer. Check the battery voltage of the entire battery pack with a digital volt meter. Put the positive lead on the MAIN positive battery post and the negative lead on the MAIN negative battery post.

Charging System Troubleshooting (Charger Will Not Turn On)

Look over the DC power plug and the Club Car power plug for any frays or breaks in the wiring. Discontinue use of the PowerDrive 48 if you find any breaks or frays. Stop using the charger if it has been exposed to rain or other moist conditions like snow. Look over the plug pins at the end of the power cord.

How to Troubleshoot a Club Car PowerDrive 48 | SportsRec

Troubleshooting a 12-volt battery charger is relatively easy. But you'll need a voltmeter to troubleshoot most chargers. Since the charger is responsible for charging your vehicle's battery, you want to make sure that it is working, that there is no resistance in the lead wires, and that the voltage coming out of the charger is what it should be.

Troubleshooting 12 Volt Auto Battery Chargers | It Still Runs

Vehicles with PowerDrive 2 chargers are designed to be left connected, with AC power to the charger on, during off-season storage. The onboard computer will automatically activate the charger every 15 days. To return the vehicle to service, unplug the charger DC cord, wait 15 seconds for the computer to reset, and plug the charger back in.

OWNER'S MANUAL FOR POWERDRIVE 2 BATTERY CHARGER

PowerDrive battery charger DC plugs have three pins rather than two blades common on most stan-dard charger plugs. Two of these pins are the positive and negative leads as on standard chargers; the third pin is a sensing lead that is the communication link between the charger and the onboard com-
